

ABSTRACT OF THE DISCLOSURE

A mobile information terminal apparatus includes a first body, a second body, and an image display section having an image display device, a magnifying optical part which magnifies the image displayed by the image display device, and an observation window which is provided on a surface of the first body and leads the image magnified by the magnifying optical part to the outside. The second body pivots between a closed position in which it partially covers the surface of the first body and an opened position in which it angles to the first body. The apparatus includes an operation section provided on the first body, a display section provided on the second body, and pointing device to operate the image displayed by the image display device. The pointing device and observation window are disposed to face toward the outside when the second body is in the closed position.
